LE DOAN ANH TUAN

SOFTWARE ENGINEERING STUDENT

Ho Chi Minh City, Vietnam | tamcaungu404@gmail.com

Final-year Software Engineering student interested in AI applications, backend engineering, C++, systems programming and GPU computing. Enjoys shipping practical projects and developing a strong technical foundation.

EDUCATION

Nguyen Tat Thanh University

Software Engineering · Final year

Ho Chi Minh City

TECHNICAL SKILLS

Languages

Python, C/C++, JavaScript, HTML, CSS

Frameworks & AI

FastAPI, TensorFlow / Keras, Vite, Capacitor

Tools & Platforms

Git, Docker, Linux, SQLite, Android tooling

Currently Learning

CUDA, parallel computing, GPU performance optimization

SELECTED PROJECTS

Lung X-ray AI

AI-assisted chest X-ray classifier (normal, pneumonia, tuberculosis). MobileNetV2 model v1.1: 89.62% test accuracy on a curated test set. Built prediction endpoints, portable packaging and SQLite-based analysis history. v2 ongoing.

Python · TensorFlow · FastAPI · SQLite · Docker

CUDA Matrix Multiplication Optimizer (In Progress)

Implemented and verified the C++ CPU matrix-multiplication baseline. Learning and planning CUDA kernels, tiling, shared memory, profiling, and fair CPU/GPU comparisons; GPU implementation not yet completed.

C++ · Linux · CUDA learning

VocaMini Vocabulary App

Built a lightweight English vocabulary web application and tested Android APK packaging with Capacitor.

JavaScript · Vite · Capacitor

EXPERIENCE

GAA / MQA Roles

Approximately 8 months of work experience; ended August 2026. Role-specific responsibilities should be confirmed before job applications.

Portfolio-inspired resume draft — please verify factual details and add public project/profile links before distribution.
